

# WHY HOST A RAIN BARREL WORKSHOP?

*When we Preserve water,  
we Preserve the Environment*

By hosting a rain barrel workshop, your organization is helping to protect our streams and rivers from pollution! Water stored in a rain barrel and used for irrigation is water that won't rush off and carry pollutants into our streams and rivers!

Those that participate in your workshop will not only be helping our local waterways but will benefit from installing a rain barrel at their home by:

- Reducing flooding in their yards or basements, by collecting the water and using it for watering plants, slowly releasing it and allowing it to sink into the ground.
- Save money and water. Instead of water from the tap, participants will be able to use the water they've saved to keep their landscape healthy - reducing their water bill!

**Renew Our Waters** *Every choice counts.*

*Let us take the work out  
of hosting a workshop!*

### WHO WE ARE...

The Fox-Wolf Watershed Alliance (FWWA) is an independent, non-profit organization that identifies issues and advocates effective policies and actions to protect, restore and sustain the water resources of Wisconsin's Fox-Wolf River Basin.

One of our goals is to increase public awareness of, participation in and support for our water resources. As an organization, we have seen an increase in public awareness and acceptance of rain barrels. Because of this, we came up with this program - to help make rain barrels *accessible and affordable* to everyone.
